Pe-Ha-Luron®

Pe-Ha-Luron® is a superior viscoelastic solution based on natural sodium hyaluronate for intraocular use. As an auxiliary device during ophthalmic surgeries the product maintains the depth of the anterior chamber and protects the

surrounding intraocular tissue. Pe-Ha-Luron® combines the advantages of both cohesive and dispersive viscoelastics. Pe-Ha-Luron® is available in two different concentrations.

- High molecular weight
- High viscosity
- No cooling required
- High cohesion for easy irrigation / aspiration
- No inflammatory or immunological reactions
- Protection of endothelial cells
- Sterile
- CE marked
