

PIONEER OF MODERN VISCOELASTICS

Dear valued Customer

We're making packaging more sustainable – starting this fall.

A small change in packaging, a big difference for the planet: From this fall, plastic shrink wrap will no longer be used – reducing plastic waste by **more than 600 kilograms of plastic** each year.

Shrink wrap is being removed from product packaging. The new look may be simpler, but it's smarter – better for the environment, and just as effective.

The Impact in Numbers

-  600 kg of plastic saved annually
-  That's about the weight of a small car
-  Equivalent to 320,000 plastic wrappers
-  Less plastic waste
-  More protection for animals and oceans
-  A step toward the circular economy

Less Plastic Waste

Without plastic wrapping, we save hundreds of kilos of plastic per year. Thank you for taking part!

- 637,68 kg

What It Means for You

The packaging might look a bit different, but the quality remains unchanged. Each purchase helps reduce waste and protect the environment – effortlessly.

Looking Ahead

The transition away from shrink wrap is just one part of a broader move toward more sustainable solutions – with more steps already in development.

Got ideas or thoughts? Your feedback is always welcome.

Best regards,
your ALBOMED team
